WORK EXPERIENCE

Data & AI Engineer

Laps

📅 Feb. 2024 – Present · 2 yr 5 mos 📍 Montreal, Quebec, Canada

Designed and implemented the entire data infrastructure for Laps, an e-commerce network specialized in golf equipment, covering everything from data ingestion and processing to value creation through strategic and operational reporting and data exposure to AI assistants (MCP server).

Contributed to the development of an automated pricing system for purchase and sales, strengthening the company's margins and competitiveness.

- Designed, deployed, and automated data pipelines in Python on AWS
- Modeled and implemented a centralized data warehouse
- Developed operational reports and dashboards with Grafana
- Python MCP server exposing the DWH to AI assistants, governed and secured

Data Developer

BIAL-R

📅 Jan. 2023 – Dec. 2023 · 1 yr 📍 Lyon, France

Contributed to the industrialization of an automated cloud-based data platform on AWS, enabling data ingestion, visualization, and predictive analytics for Public Housing Offices.

In parallel, led an Operations & Support service center for Clariane.

- Designed, deployed, and automated ETL data pipelines with Pentaho
- Provided cross-functional support for the data platform and integrated new clients
- Led the service center: team management, coordination, and continuous improvement

ETL Consultant

BIAL-R – Clariane

📅 Sept. 2021 – Dec. 2022 · 1 yr 4 mos 📍 Lyon, France

Technical lead within the Operations & Support team, responsible for all inter-application data flows at Clariane across finance, HR, healthcare, and customer relations domains.

- Developed and maintained inter-application data flows with Pentaho
- Managed production incidents: analysis, troubleshooting, and data recovery
- Contributed to the migration of inter-application data flows from Pentaho to an ESB

Data Engineer Trainee

BIAL-R

📅 Sept. 2020 – Aug. 2021 · 1 yr 📍 Lyon, France

Master's work-study (final year of MIAAGE program), primarily focused on projects for Autoroutes Paris-Rhin-Rhône (APRR) in finance, toll operations, highway management, and customer relations.

This experience allowed me to develop skills across the entire business intelligence information system.

- Mapped and implemented data governance processes
- Developed and deployed operational reports
- Designed and maintained ETL data flows using Pentaho

INTERESTS

Table Tennis

Played for over 10 years in a club.

Travel

Visited 17 countries so far, with many more to come.

IT Support Trainee

Park Hyatt Paris-Vendôme

📅 Apr. 2018 – Jul. 2018 · 4 mos

📍 Paris, France

Final-year DUT internship within the IT department of a luxury hotel in Paris.

- Maintained and supported IT infrastructure (workstations, networks, servers)
- Participated in the deployment of new IT projects
- Assisted in implementing and monitoring cybersecurity measures

EDUCATION

Master's degree in Computer Science Applied to Business Management (MIAGE)

UCBL – University Claude Bernard Lyon 1

📅 Sept. 2019 – June 2021

📍 Lyon, France

Specialization in Health Management Information Systems.

Bachelor's degree in Computer Science

UQAC – University of Quebec at Chicoutimi

📅 Sept. 2018 – June 2019

📍 Chicoutimi, Quebec, Canada

Dual degree (DUETI) in collaboration with the University of Versailles Saint-Quentin-en-Yvelines (UVSQ).

Associate's degree in Computer Science (DUT)

UVSQ – University of Versailles Saint-Quentin-en-Yvelines

📅 Sept. 2016 – June 2018

📍 Vélizy-Villacoublay, France

PROJECTS

AWS Lambda ETL – Serverless Pipeline Framework

Personal Project

📅 Jun. 2025 – Sept. 2025 · 4 mos

Developed a serverless ETL framework on AWS Lambda, enabling the creation of modular, scalable, and cost-effective pipelines for automated data workflows.

CoPill – Connected Pillbox

University Claude Bernard Lyon 1

📅 Feb. 2020 – Apr. 2020 · 3 mos

Final-year team project to transform a traditional pillbox into a connected solution aimed at improving treatment adherence for seniors, patients, and athletes. The project covered the entire product lifecycle (discovery, specifications, prototyping, user testing, and validation) as well as project management (planning and iteration tracking).

Technically, the embedded prototype was developed in Python on a Raspberry Pi with modules (LEDs, sensors, display, buzzer) and complemented by an Android application in Java for monitoring and control.

Swarm Debugging – API Migration to GraphQL

Formal Computer Science Laboratory at UQAC

📅 Jan. 2019 – Apr. 2019 · 4 mos

Swarm Debugging is a project developing an Eclipse IDE plugin to facilitate collaborative debugging among developers via crowdsourcing.

As part of this project, we migrated the API from a REST model to a GraphQL model implemented in Java with Spring Boot. The migration provided more flexible queries, reduced data over-fetching, and simplified API maintenance and evolution thanks to a typed, self-documenting schema.
